Beat the heat summer quiz

Summertime is a great time to get outdoors and enjoy the sunshine. But dehydration and sunburn can quickly spoil the fun if you’re not careful. Test your sun smarts and learn a few new tricks for a safe summer.

True or False?

1. You can get a sunburn through a window or sunroof.  
2. All sunglasses offer the same protection against harmful rays. Choose sunglasses that block 100% of UVA and UVB rays. 
3. Certain antibiotics, antidepressants, acne medications, cholesterol drugs, pain relievers and other medicines don’t mix well with a dose of UV light. You can check for warnings about sun sensitivity on the bottle. Better yet, ask your doctor if your medications can make you more sensitive to the sun. 
4. Thirst is the most obvious sign of dehydration. If your urine color is deep yellow or amber, you may be dehydrated. Other signs include fatigue, dizziness and confusion. 
5. Drink water before, during and after exercise. When exercising in hot and humid weather, you can get dehydrated in as little as 30 minutes. 
6. Alcoholic beverages have a dehydrating effect on your body. While caffeinated beverages such as coffee make you urinate more, they offer some hydration due to water content.
